1. Claims 1-42 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

Regarding the claimed terms, the Examiner notes that a "general term must be understood in the context in which the inventor presents it." *In re Glaug* 283 F.3d 1335, 1340, 62 USPQ2d 1151, 1154 (Fed. Cir. 2002). Therefore the Examiner must interpret the claimed terms as found on pages 1- 29 of the specification. Clearly almost all the general terms in the claims may have multiple meanings. So where a claim term "is susceptible to various meanings, . . . the inventor's lexicography must prevail" *Id.* Using these definitions for the claims, the claimed invention was not reasonably found in the prior art.

4. The closest prior art of record is US Publication No. 2002/0071559 to Christensen et al. ("Christensen").

Christensen discloses a method and apparatus for providing electronic data. However, Christensen does not teach at least using the content server to send the email message to the recipient user wherein, upon receiving the email, the recipient user logs onto a forwarding server at the document publisher, the forwarding server being different from the content server and receiving and resolving the link at the publisher and downloading from the forwarding server a secure viewer program to the recipient user and an encrypted version of the requested document content to the secure viewer program as recited in independent claim 1; means in the content server for sending the email message to the recipient user wherein, upon receiving the email, the recipient user logs onto a forwarding server at the document publisher, the forwarding server

being different from the content server and means for receiving and resolving the link at the publisher and downloading from the forwarding server a secure viewer program to the recipient user and an encrypted version of the requested document content to the secure viewer program as recited in independent claim 15 and program code for controlling the content server to send email message to the recipient user wherein, upon receiving the email, the recipient user logs onto a forwarding server at the document publisher, the forwarding server being different from the content server, program code for receiving and resolving the link at the publisher and downloading from the forwarding server a secure viewer program to the recipient user and an encrypted version of the requested document content to the secure viewer program as recited in independent claim 29. Moreover, the missing claimed element from Christensen is not found in a reasonable number of reference(s). Yet even if the missing claimed element was found in a reasonable number of references, a person of ordinary skill in the art at the time the invention was made would *not* have been motivated to include this missing element in an embodiment in the Christensen.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- “Streaming Data Driven Applets and Pages” to Nadal provides a general overall of streaming applets.
- U.S. Publication No. 2007/0265972 to Tsutsui discloses generating an e-mail containing an URL.
